

# DeLaval MPC150 & Fi7

- Various cow side alarms including blocked air bleed, liner slip, and kick off
- Cow side monitoring of milk yield, flow, and milking duration
- Pulsation ratio changes to one of 5 pre-set configurations during main milk phase to ensure efficient milk harvesting
- MPC150 uses box in a box design to ensure long life in the harshest parlor environments
- Fi7 uses no moving parts for milk yield indication and self-calibrates at start up
